Use the control pad mounted on the desktop to power on/off the projector, adjust the volume, mute the audio and/or video, and select the source to display (PC, HDMI, Apple TV).

- Wait a minute before pressing any other buttons.
- The room audio is muted until the projector is on.

The Apple TV allows you to display your Apple device wirelessly. If you want, you can also log into iTunes or other installed apps to display those apps. You do NOT need to log into iTunes to display your personal device. Be sure to LOG OFF if you do.

Press the Apple TV button on the projector control pad. If you only see a blue screen, find the Apple TV remote, which may be in the AV cabinet, & press a button to wake up the Apple TV. If it still doesn’t respond, plug in the white charging cable inside the AV cabinet.

Access AirPlay on your device and look for “Apple TV ATLAS 338 DAV.” The password is “338”. For more detailed instructions, visit support.apple.com & search for AirPlay. With an app like AirParrot 2, you can also display Windows/Android devices: airquirrels.com/airparrot

On your iPhone/iPad, swipe up from the Home button to bring up the AirPlay Mirroring button. Tap that & choose the appropriate Apple TV.

On a laptop, click the AirPlay button in the top right corner of your screen. If you don’t see it, check your display preferences to make sure AirPlay is enabled or switch between extended & duplicate display.
