If you need to show a Blu-ray disc or DVD in an ATLAS classroom, you can borrow the USB Blu-ray drive from the help desk in G89 FLB. You can then plug it into the resident computer.

- Turn the projector on and select the PC.
  - You can also use your laptop if you plug it into the system.
- Plug the Blu-ray drive into the computer with the USB cable.
  - Open the VLC player app—on the desktop it looks like an orange traffic cone.
  - Press the Media button in the top left.
  - Select the Open Disc option.
  - A new box will open. Select BluRay at the top, and make sure that the name of what you are trying to play shows up next to Disc Device.
    - If not, click the drop-down arrow to select it.
    - If it’s still not there, press browse, click on this PC on the left, and select the BluRay player near the bottom.
- Press Play and disk will begin playing.
